First, you must obtain a cracked version of the software from a trusted source. Once you have downloaded the cracked version, you must disable all security measures, such as antivirus and firewall protection. Cracking Adobe Photoshop is not as straightforward as installing it. And the entire creative process becomes more efficient. A client can access editable versions of your work directly in the browser without the need to open Photoshop on his own device. And you can annotate and review them right inside the web browser with the Cloud Site feature. It's part of the Cloud option now found in the menu. There are still a couple of problems with the Crowd support app. For instance, it doesn't work very well if you access the service concurrently from multiple platforms (such as your home computer and a tablet). I often make print files from Photoshop when I'm back at my office, so I'll need to create a document on my desktop at home, take that file to the office by hand, and continue working on the project from my tablet at the same time. (You can select one or the other in the menu.) Additionally, Creative Cloud accounts offer a limited number of available storage slots. That's the reason why you'll see people use cloud storage programs such as Dropbox or OneDrive as part of their workflow. I don't find it a problem since the Photoshop Elements apps offer perfect online storage. As Photoshop Elements has become more feature rich, I find it important to examine the software in detail. For example, I use the selection tool to select an area of an image and shrink it for printing by cropping out unwanted parts. The format has changed for the better. You can choose the size of the frame you're shrinking your work in, and even set the area outside the frame 50% transparent so you can see the original scene at the same time.

To achieve a gentle shadow effect, follow these steps: Apply a source-at-light layer style and pick a color from the color picker. Click the layer with the shadow effect to select it and enter the exact value that you want for the shadow's Opacity (85% seems to work fine here). Open the Layer Style Window by clicking the Layer Style button which is on the layer's Layers panel (shown to the right). Click the down arrow on the right side of the General group and you will find a setting called Gradient Overlay. Adjust the gradient overlay settings as desired.
