PeaZip NLite Addon Crack+ Free

----- Allows you to use your keyboard shortcut keys to open a macro file instead of going through the nLite GUI. CONFIGURATION: ----- iSwitch macro files are text files containing a list of keystrokes that will be executed when a given event occurs. The purpose is to simplify nLite work by using macros files instead of dragging and dropping components on the nLite interface. An event is a change in the configuration of the product that can be visualized in the nLite interface. Example: if you want to perform the same task when you insert a CD (click a button) you can use a macro file containing a single keystroke: "This program will run whenever you insert a CD". You can assign a shortcut key to the selected macro file, so instead of manually going through the GUI, you can press this keystroke to activate the macro when a given event occurs. Here is an example of a macro file, where X is the shortcut key. When you insert a CD the program will open automatically: INSERT CD { X X X } MACRO_FILE nLite.txt You can also use several keystrokes separated by semicolons. INSERT CD { X;X;X } MACRO_FILE nLite.txt A macro file must begin with a line containing the label of the macro file. MACRO_FILE1 macro file title You can also use several keystrokes separated by semicolons. You can have a list of macro files that will be used by nLite when the corresponding events occur. Macros files names are case insensitive, but labels have to begin with a capital letter. MACRO_FILE2;MACRO_FILE3 macro files titles You can also define a global macro file that will be used instead of all the other files. MACRO_FILE Global.txt If you have several shortcuts keys you can define them in a single macro file, separated by semicolons. SHORTCUT 1;SHORTCUT 2;SHORTCUT 3 Shortcut key descriptions You can also define a list of shortcut keys for a label. You can define a label that can be used by a list of shortcut keys. LABEL MyLabel;SHORTCUT 1;SHORTCUT 2;SHORTCUT 3 2edc1e01e8
