It shows the number of magazine covers designed by photographers (as opposed to Illustrators) and the number of magazines that have used photoshop, not just a share of editorial budgets. The infographic comes just in time to see if that trend changes. Microsoft recently announced a photo-editing app for the Windows 10 Microsoft image app. I am excited about this additional option for a synced consumer version for Windows 10 mobile computer users because it broadens subscription options in addition to the monthly subscriptions offered by Apple and Adobe for photo related software. With the current, hodge-podge and lock-in nature of the iOS and Android photo app subscription models, integrating a new option for the Windows 10 image app that offers space for users to sync their files to the cloud is smart. The additional security of syncing to the cloud limits the number of ways that hackers could attempt to compromise a person's photo files and data.

The new Photoshop in HTML5 (PSH) features the full Photoshop functionality on the web, regardless of the platform or device you are using. The introduction of PSH proves the open web is a legitimate platform for professional photo editing and the democratization of high-end features for all. The first version of the PSH HTML5 app provided Photoshop users (mainly designers and developers) the ability to load and edit Photoshop-compatible files and crop images on the go and launch the full Photoshop UI when they needed to apply adjustments. This year, the core Photoshop CC apps include a new Crop tool, a new creative filtering, and new interactive painting tools. The Crop tool is on the fly and lets you choose, modify and save a crop that you can then share as an artboard. The following tools are also available to all users in the Creative Cloud Photography app, regardless of subscription. It's important to note that these features are also available in Photoshop on the web. Some of these features will be added to Elements later on.
